ME-AGS-N wiring diagram –
For Northern Lights (NL-673)

For the START RELAY, use a VOLTAGE MONITOR RELAY that has over/under voltage set-points. This is to adjust the relay to prevent it from energizing until the generator output level is stable enough to power a load. Examples are: VMKP120A (www.macromatic.com) or CSJ-38-70010 (www.tycoelectronics.com)

Magnum Energy, Inc. provides this diagram to assist in the installation of the Auto-Generator Start controller. Since the use of this diagram and the conditions or methods of installation, operation and use are beyond the control of Magnum Energy, Inc., we do not assume responsibility and expressly disclaim liability for loss, damage or expense arising out of the installation, operation and use of this unit.
